

AP Computer Science A Syllabus	
--	--

Course Description

AP® Computer Science A is both a college-prep course for potential computer science majors and a foundation course for students planning to study in other technical fields such as engineering, physics, chemistry, geology, etc. The course is all about learning to be a problem solver, focusing on programming methodology, procedural abstraction, and in-depth study of algorithms, data structures, and data abstractions, as well as a detailed examination of a large case study program. Instruction includes preparation for the AP Computer Science A Exam. Hardworking students will gain clear understanding of Java and the ability to adapt to any new programming language that will come along. This course is an introduction to the fundamental concepts of computer science and a key to the future of solving the world's biggest problems.

The resources list includes the following text references: Java Au Naturel (JAN), Think Java (TJ), Java SE API (API)

Unit (Weeks)	Title, Topics, and Student Objectives	Resources, Assessments, and Strategies
1 (0-2)	<p>Programming Language Basics</p> <p>Topics:</p> <ul style="list-style-type: none"> • Compiler process, high-level source code to byte code • What is a program? • Debugging and types of errors • Java basics • Introduction to IDEs (BlueJ, Eclipse) <p>Objectives:</p> <ul style="list-style-type: none"> • Understand basic programming terminology: compiler, IDE, executable, source code, syntax, debug • Understand the different compile time errors, runtime errors, and logic errors • Edit, compile and run a simple program in Java • Use input and output with System.out and System.in and BufferedReader 	<p>Resource: TJ chapter 1 and Appendix B and D, API, BlueJ IDE, Eclipse IDE</p> <p>Assessment:</p> <ul style="list-style-type: none"> • Quiz: Vocabulary, and terminology • Lab: Hello World program in BlueJ and Eclipse <p>Strategies: Stress the concept that the programming language is the tool a computer scientist uses to solve problems. We are going to learn one of many tools you may use. We are using Java as a tool to learn computer science, but computer science is not the study of programming languages.</p>
2 (3-5)	<p>Turtle <i>(Introduces objects and inheritance)</i></p> <p>Topics:</p> <ul style="list-style-type: none"> • Objects • Classes • Inheritance • Syntax <p>Objectives:</p> <ul style="list-style-type: none"> • Write and use simple classes with Turtles • Learn the basics of Java syntax and objects 	<p>Resource: JAN chapter 1, BlueJ IDE</p> <p>Assessments:</p> <ul style="list-style-type: none"> • Program-specific tasks using Turtle • Create a SmartTurtle Class to teach the turtle to make big square and small squares • Use SmartTurtle object to draw three hexagons with two meeting along one side (Exercise 1.11) • Draw flowers with circles, and pedals (Exercise 1.20) • Use turtle object to draw fractal trees* (Section 1.10)

<p>3 (6-7)</p>	<p>Variables and Arithmetic</p> <p>Topics:</p> <ul style="list-style-type: none"> • Using and understanding variables and type • Variable declaration, and initialization • Comments • Naming rules of variables • Arithmetic operators and expressions in Java programs • Representing numbers in different bases <p>Objectives:</p> <ul style="list-style-type: none"> • Understand terminology comments, variables, constants, reserved words, literals • Declare and initialize variables and constants in Java • Understand mathematical expressions in Java and their precedence • Understand how to change bases of numbers • Understand limitations of finite representations of numbers such as the range of integers, real, and float • Use the assignment operator correctly 	<p>Resource: TJ chapter 2</p> <p>Assessment:</p> <ul style="list-style-type: none"> • Play an error finding game called “Stump the Chump” (Exercise 2.1) • Practice developing a program gradually. Use string concatenation to display values with different types, integers and strings. (Exercise 2.2) • Practice using arithmetic operations and compound entities like time of day. Stumble upon integer division issues. (Exercise 2.3) • Lab: Paycheck program. Have employee information entered and calculate pay. Then update program to include overtime hours in the calculations • Glossary quiz <p>Strategies:</p> <ul style="list-style-type: none"> • Students need time to practice with how the different types, double and int relate when they are used in mathematical operations • Present a lot of small program examples in which they have to find the errors
<p>4 (8-9)</p>	<p>Methods, Conditionals, and Recursion</p> <p>Topics:</p> <ul style="list-style-type: none"> • double and int data types, and typecasting • Calling Java library methods • Adding new methods, and invoking them • Methods in a class • Parameters, argument, and returning results • Modulus operator • Conditional statements • Nested conditionals • Recursion 	<p>Resource: TJ chapters 3 and 4, http://www.codingbat.com/</p> <p>Assessment:</p> <ul style="list-style-type: none"> • Practice reading code and understanding the flow of execution. (Exercises 3.2, 4.2, 4.4) • Write and invoke methods with parameters (Exercises 3.3, 3.4, 4.5) • Write a recursive method to print the counting pattern of a song (Exercise 4.3) • Complete conditional drills using Codingbat.com • Glossary Quiz (both chapters)

	<p>Objectives:</p> <ul style="list-style-type: none"> • Understand the difference between int and double how they interact • Creating new methods with zero to many parameters, and calling (invoking) the methods • Understand the modulus operators function and why it is so useful in solving problems • Use type casting to make their data more accurate • Create conditional statements, with alternate execution, and chained conditionals using if/else if/else • Understand the concept of recursion and recognize it in a program 	<p>Strategies:</p> <ul style="list-style-type: none"> • Assign lots of problems for students to read and decide the output and focus on small details. • Assign small programs to practice writing code and learning syntax of methods and classes. • Solve many small problems that can be solved with small conditional statements and using Java methods
5 (10-11)	<p>Magpie: Lab 1</p> <p>Topics:</p> <ul style="list-style-type: none"> • Objects, Instances • Constructor • Class • Attributes <p>Objectives:</p> <ul style="list-style-type: none"> • Run the Magpie chatbot • Understand how the development new methods • Complete all activities in Lab 1 • Understand the Magpie class • Extend the MagpieRunner class 	<p>Resource: Magpie Chatbot Lab Student Guide</p> <p>Assessment:</p> <ul style="list-style-type: none"> • Activity 1, Chatbots • Activity 2, Objects • Activity 3, String Class and Objects • Activity 4, Testing and Objects • Activity 5, Arrays and Objects <p>Strategies:</p> <ul style="list-style-type: none"> • Read the manual for Lab 1 thoroughly • Be familiar with all the classes and interfaces discussed • Review GUI Summary
6 (12)	<p>Program development and useful methods</p> <p>Topics:</p> <ul style="list-style-type: none"> • Fruitful Methods (that return values), Conditional paths and dead ends • Incremental program development • Scaffolding code • Method composition and Overloading • Boolean Expressions and relational operators and Logical 	<p>Resource: TJ chapter 6</p> <p>Assessment:</p> <ul style="list-style-type: none"> • Practice writing Boolean method (Exercise 6.1) • Use conditional statements to write a fruitful method (Exercise 6.3) • Understand logical operators and flow of execution (Exercise 6.4) • Use method composition (Exercise 6.5) • Diagram and translate recursive problems from know mathematical algorithms

	<p>operators</p> <ul style="list-style-type: none"> • Boolean Methods • Revisit Recursion <p>Objectives:</p> <ul style="list-style-type: none"> • Create a recursive method to solve a problem • Understand how to write, call and compose methods that return values • Understand basic design strategies using incremental program development and top down design • Understand how to read and write conditional statements (boolean expressions) using relational and logical operators. 	<p>(Exercises 6.6, 6.7, 6.10)</p> <ul style="list-style-type: none"> • Glossary Quiz <p>Strategies:</p> <ul style="list-style-type: none"> • Assign lots of code to read and to write and study together as well as individually. • Visually represent the flow of the program and how diagram the flow of a recursive solution to a problem. • Study new glossary words and tie them back to previous words
7 (13-14)	<p>Iteration and Encapsulation</p> <p>Topics:</p> <ul style="list-style-type: none"> • Assignment operator vs. Equality operator (= vs ==) • The while control statement • Infinite loops • Relationship between recursion and iteration • Encapsulate code into generalized methods • Local variables <p>Objectives:</p> <ul style="list-style-type: none"> • Construct syntactically correct loops and conditional statements • Use while loops to print tabular data • Understand encapsulation and generalizing methods for reuse. • Understand terminology: control statements, infinite loops, local variables 	<p>Resource: TJ chapter 7</p> <p>Assessment:</p> <ul style="list-style-type: none"> • Study the flow of a program using loops by drawing tables to track variable values and decide output. (Exercise 7.1) • Lots of practice writing methods that use iteration to solve repetitive problems. (Exercises 7.2-76) • Glossary Quiz <p>Strategies:</p> <ul style="list-style-type: none"> • Give students lots of experience reading, following and writing methods that use the while loop to solve problems.
8 (15-16)	<p>Strings and Things</p> <p>Topics:</p> <ul style="list-style-type: none"> • Invoking methods on String objects • Find the length of a String • Traversing a string 	<p>Resource: TJ chapter 8</p> <p>Assessment:</p> <ul style="list-style-type: none"> • Write a simple method that traverses a String and manipulates the string. (Exercise 8.1)

	<ul style="list-style-type: none"> • Run-time errors and reading the stack trace. (and exceptions) • Reading documentation • Increment and decrement operators (- -, ++) • Strings are immutable <p>Objectives:</p> <ul style="list-style-type: none"> • Understand that Strings are collections of characters • Read and understand String method documentation. (java.lang) • Understand appropriate use of increment and decrement operators • Understand the atypical properties of the String object. (Immutable, incomparable, etc) 	<ul style="list-style-type: none"> • Learn to read and understand the stack trace of an error. (Exercise 8.2) • Practice encapsulation using Strings (Exercises 8.3-8.4) • Experiment with data type concatenation (Exercise 8.5) • Read and follow and correct Java programs (Exercises 8.6-8.8) • Write methods to solve problems with Strings (Exercises 8.9-8.12) • Continue study of GridWorld and add mathematical methods. (Exercise 8.13) • Glossary Quiz <p>Strategies:</p> <ul style="list-style-type: none"> • Write several methods that read and manipulate Strings
9 (17-18)	<p>Mutable Objects</p> <p>Topics:</p> <ul style="list-style-type: none"> • The Abstract Window Toolkit (java.awt) • import from other packages • new operator for creating object instances (new object references) • Instance variables and dot notation • Points and Rectangles • Objects as parameters and return types • Objects are mutable • null • Aliasing and Garbage collection • Primitive and object types <p>Objectives:</p> <ul style="list-style-type: none"> • Understand which packages are imported automatically (Math, String, etc) • Understand the details of assigning a variable to a new object reference. • Access instance variables using dot notation and changing their values • Use null to initialize object variables • Understand when an object will be 	<p>Resource: TJ chapter 9, TJ Appendix A</p> <p>Assessment:</p> <ul style="list-style-type: none"> • Read, follow, and track flow of programs that use objects (Exercises 9.1-9.3) • Write programs using BigInteger objects (Exercises 9.4-9.5) • Use objects and java.awt to create simple graphics (Exercises A.1-A.3) • Glossary Quiz <p>Strategies:</p> <ul style="list-style-type: none"> • Focus on understanding object oriented concepts using analogy and example. • Create visual graphics to help understand the concept of objects • Lots of practice reading, studying, and writing code

	claimed by garbage collection.	
10 (19-20)	<p>Picture Lab: Lab 2</p> <p>Topics:</p> <ul style="list-style-type: none"> • Two-dimensional arrays • Nested Loops • Binary Numbers • Interfaces • Inheritance <p>Objectives:</p> <ul style="list-style-type: none"> • Understand image representation and binary representations. • Understand how extended classes are related to the base class they extend. • Understand methods using nested loops 	<p>Resource: Picture Lab</p> <p>Assessment:</p> <ul style="list-style-type: none"> • Activities A1-A9 Complete all the exercises for each activity <p>Strategies:</p> <ul style="list-style-type: none"> • Using digital pictures to motivate students to write methods and practice using arrays, loops, binary representations, interfaces, and inheritance
11 (21-22)	<p>The Computer and Society Research Project</p> <p>Topics:</p> <ul style="list-style-type: none"> • How has the computer affected society? • Evolution and history of computer languages • Ergonomics and lifestyle • Ethics, what can be done/what should be done • Computer careers and fields of study <p>Objectives:</p> <ul style="list-style-type: none"> • Understand history and future of computer science • Understand the role of computer science in solving/creating problems in society • Research computer careers and the need for creative problem solvers 	<p>Resource: Khan Academy, TED.com, Pioneer Online, Internet, library, handouts</p> <p>Assessment:</p> <ul style="list-style-type: none"> • Research paper on the History of computer languages. • Creative paper on the future of computer science and technology in our society • Research and presentation on the need for computer scientists in our economy • Write about a computer ethics issue of choice <p>Strategies:</p> <ul style="list-style-type: none"> • Research, write, present, and discuss historical and current state of computer science and look a little into the future to see what is coming.
12 (23)	<p>Creating your own objects</p> <p>Topics:</p> <ul style="list-style-type: none"> • Defining new classes • class defines an object type • Constructors 	<p>Resource: TJ chapter 11</p> <p>Assessment:</p> <ul style="list-style-type: none"> • Practice the mechanical part of creating a new class definition and code to test it.

	<ul style="list-style-type: none"> • Instance variables • Types of object methods (Pure functions, modifiers) • Creating new objects • Algorithms <p>Objectives:</p> <ul style="list-style-type: none"> • Understand that defining a new class also creates a new object type with the same name. • Understand that every object belongs to some object type, that it is an instance of some class. • Understand that invoking new to create an object invokes a constructor method. • Understand that you provide one or more constructors as part of the class definition. • Learn syntax issues about class definitions such as capital letters starting the names of classes.. • Understand that human have the creative task of designing algorithms, and computers have the unintelligent task of executing them. 	<p>(Exercises 11.1, 11.2)</p> <ul style="list-style-type: none"> • Write a class definition that includes a variety of methods including constructors, modifiers and pure functions (Exercise 11.3) • Glossary Quiz <p>Strategies:</p> <ul style="list-style-type: none"> • Read lots of coded examples of class definitions, and creating instances of objects. • Write and design lots of class definitions • Select appropriate algorithms and data structure to solve problems • Practice simple algorithm design.
13 (24)	<p>Arrays</p> <p>Topics:</p> <ul style="list-style-type: none"> • Declaring and initializing array variables • Indexing arrays and access array elements • for loops • Arrays and objects • Random numbers • Counting with arrays <p>Objectives:</p> <ul style="list-style-type: none"> • Understand array syntax with square brackets. • Understand how to iterate through arrays with for loops • Understand that arrays are similar to objects, but have differences • Learn to copy arrays using for loops 	<p>Resource: TJ chapter 12</p> <p>Assessment:</p> <ul style="list-style-type: none"> • Practice using for loops to iterate through the elements of an array (Exercise 12.1) • Practice using a method to copy and array (Exercise 12.2) • Practice writing random methods (Exercises 12.3-12.4) • Write methods that take arrays as parameters (Exercises 12.5-12.7) • Read and understand code with arrays (Exercises 12.8-12.9) • Write a selection sort to sort arrays (Exercise 12.11) • Design algorithms and write methods to solve simple problems (Exercises 12.12-12.16) • Glossary Quiz

	<ul style="list-style-type: none"> • Understand how arrays are passed to methods • Understand how to create new arrays of different types. 	Strategies: <ul style="list-style-type: none"> • Lots of practice looping and indexing elements in arrays. • Compare Arrays to objects to highlight differences and similarities. • Select appropriate algorithms and data structures to solve simple problems
14 (25-26)	Arrays of Objects and Objects of Arrays Topics: <ul style="list-style-type: none"> • Develop complex programs using OOP • Create Card and Deck classes and associated methods that operate on them • Merge Sort Algorithm • Linear Search, Bisection Search algorithms • Pseudocode Objectives: <ul style="list-style-type: none"> • See the development process of complex programs using objects, arrays, loops, etc. (putting it all together) • See the need for the merge sort in a program context. • Understand how to use pseudocode as a tool for design • Understand and compare the use of linear search and bisection search algorithms with one dimensional arrays of objects. 	Resource: TJ chapters 13-14 Assessment: <ul style="list-style-type: none"> • Follow along and create the classes and methods from the chapters (Exercises 13.1-13.2) • Extend the functionality of Cards for use in card games. (Exercises 13.3-13.5) • Implement the shuffling and sorting for cards and decks (Exercise 14.1) Strategies: <ul style="list-style-type: none"> • Card and Deck objects case study used to practice object oriented programming techniques • Use the Deck object to see the need for searching and sorting algorithms. • Focused discussion on comparing the linear search algorithm and bisection (binary) search algorithm and which one is the best to solve the problem for the Deck object.
15 (27-28)	Object oriented programming and Inheritance Topics: <ul style="list-style-type: none"> • Pure OOP (not just using objects for procedural programming) • Object methods vs. class methods (static methods). • Implicit vs Explicit references • Overriding methods (such as toString(), equals()) • this 	Resource: TJ chapter 15 Assessment: <ul style="list-style-type: none"> • Transform class methods to object methods. (Exercises 15.1-15.4) • Continue using Card and Deck objects to write another card game program. (Exercise 15.5) • Glossary Quiz Strategies:

	<ul style="list-style-type: none"> • Inheritance, class hierarchy <p>Objectives:</p> <ul style="list-style-type: none"> • Understand the purpose of using object oriented programming • Understand object inheritance • Understand when it is appropriate to override methods • Create object methods that use implicit references and this. 	<ul style="list-style-type: none"> • Continue the case study and introduce new object oriented concepts and design techniques.
16 (29-31)	<p>Elevens Lab: Lab 3</p> <p>Topics:</p> <ul style="list-style-type: none"> • Class definitions • Abstract Classes • ClassDesign • API (Application Programming Interface) • Methods and Objects • GUI OOP <p>Objectives:</p> <ul style="list-style-type: none"> • Understand Java Interfaces • Understand data encapsulation and isolating object classes from each other using private methods and variables • Implement Interfaces for the Lab 3 	<p>Resource: Elevens Lab</p> <p>Assessment:</p> <ul style="list-style-type: none"> • Activity 1 – Activity 11 Complete the Elevens game by completing each activity
17 (32-36)	<p>Review</p> <p>Topics:</p> <ul style="list-style-type: none"> • Review AP Computer Science A topics <p>Objectives:</p> <ul style="list-style-type: none"> • Prepare for the AP CS A Exam by reviewing material and taking practice exams 	<p>Resource: Previous free-response questions from AP Central</p> <p>Assessment:</p> <ul style="list-style-type: none"> • Practice exams
